

Fellowship Opportunities in Radiation Oncology McGill University Cedars Cancer Centre

Job Title: Radiation Oncology Clinical and Research Fellowship in Women's Cancers

During a one year period of additional training, the fellow will acquire and integrate advanced knowledge and skills specific to the management of female patients with gynecologic and breast malignancies. On completion of the program, the fellow will possess the knowledge and skills to be able to independently:

- Formulate and defend the management plan for patients with breast and gynecologic cancers using the clinical, imaging, histological and biological available biomarkers.
- Plan radiotherapy treatments with different techniques including 3D-CRT, IMRT and volumetric modulated arc therapy (VMAT).
- Perform intraoperative breast radiotherapy treatments using the Intrabeam system.
- Perform image-guided (CT and MRI-based) brachytherapy for gynecologic cancers.
- Understand treatment radiotherapy planning including different dose regimens and dose constraints, and toxicities for organs at risk.
- Complete research projects in the related fields.

Interested Applicants:

Currently we have one funded position for the 2018-2019 academic year. General guidelines, prerequisites, and general and specific competencies are given in the McGill Faculty of Medicine website: http://www.medicine.mcgill.ca/postgrad/programs_hm

For more information please contact:
Dr. Joanne Alfieri (joanne.alfieri@mcgill.ca)
Program Director, Radiation Oncology

Closing date for applications is September 1st, 2017
